

## Add protection to the secondary distribution box

### Overview

Include protection devices like breakers, fuses, and surge protectors—each circuit should have its own protection. Comply with standards: Follow NEC, IEC, or local codes. Within the protection range of the lightning rod, should the surge protective device installed in the distribution box on the roof be of level one or level. Selecting a reliable outdoor electrical junction box is only the first step in ensuring electrical safety. Proper installation determines the long-term durability of the system. For heavy-duty enclosures, using at least two support rods is a fundamental technical requirement to prevent structural. Distribution boxes contain many protective devices like circuit breakers, fuses, and isolator switches to distribute and regulate power from the main power supply to multiple circuits in other buildings, and to prevent damage and fire hazards, usually installed in electrical rooms, basements, or. The outgoing line from the low-voltage end of the transformer is 0. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1).
