

## Are all the distribution box enclosures grounded

### Overview

148 (Grounding Conductor): Requires metallic junction boxes—and by extension, cabinet doors—to bond to ground using a designated grounding screw or clip. Your boss might insist on it, while your. Proper electrical enclosure grounding is a vital facet for providing safety, performance and uptime. Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. Make sure all tools are intact to prevent accidents during the grounding. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. His reasoning is that it changes the pvc to the gear so the conduit isn't bonded to the gear going into.
