

Busbar connectors are connected by multiple bolts

Overview

Bolted joints are created by overlapping the bars and then inserting bolts through holes in the overlapping area, with flat washers under both the bolt head and nut sides to spread the load, Figures 1 and 2. There are many situations where it is necessary to join two busbars to create a single, unified unit. The result of. Siemens uses a Belleville washer on each side of the joint and 1/2" SAE Grade 5 Carbon Steel Bolts, with a torque of 50 ft-lbs: All splice plates can be accessed, bolted and unbolted from the front of the switchboard to make connections of adjacent sections easy. But if current flows through bolts, stainless steel bolts will heat more due to higher resistivity. 0 Jointing of Copper Busbars David Chapman 6. 1 Introduction Busbar joints are of two types; linear joints required to assemble manageable lengths into the installation and T-joints required to make tap-off connections. Joints need to be mechanically strong, resistant to environmental effects and.
