

Can optical cables be laid mechanically

Overview

Directly buried optical cables can be laid manually or mechanically. The risk of damage occurring during the installation process rises with the temperature. Ensure that the installation area has no objects that could damage the cable such. Due to different construction conditions and construction requirements, fiber optical cables will be laid in different methods and scenarios. Direct Burial. There are three common laying methods for outdoor optical cables, namely: underground pipeline laying (that is, laying optical cables in underground pipelines), direct underground laying and overhead laying (that is, laying from utility poles to utility poles in the air. Common installation methods include direct burial, overhead, pipeline, underwater, and indoor installations.
