

Durable optical module structural components

Overview

These materials include optical glass, Fused Silica, crystals such as calcium fluoride, magnesium fluoride, germanium and silicon, as well as glass ceramics and special materials. The antireflection coating process for all components ensures that there are no reflections on. They mainly consist of optoelectronic components (such as optical transmitters and receivers), functional circuits, and optical interfaces, aiming to achieve the functionalities of optical-to-electrical and electrical-to-optical signal conversion in optical fiber communication. The working. Everything you need to build an optical network from end-to-end. Thin-film filter and PLC based AWG for multiplexing, a full suite of components for optical amplification use, optomechanical or MEMS-based switches for protection or surveillance application, Tap PD for power monitoring and VOA for. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. Jenoptik offers high-quality optical components for precise measurement, analysis, structuring and processing using light. Our components are optimized to meet your specific requirements. Despite the variety in types and designs, these modules share a common structural framework.
