

Fiber Optic Cable Underground Project

Overview

A practical, engineering-focused guide to planning and installing underground fiber optic cables with the right cable structure, trench design and protection level for long-life, low-risk networks. Match trench method with the correct underground fiber structure (GYTS). Using Conduits to Protect Underground Fiber Cables In areas exposed to moisture, mechanical stress, or future excavation, installing fiber optic cable within an underground conduit provides an additional layer of protection. Underground cables are pulled in conduit that is buried underground, usually 1-1.2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up. As a leading manufacturer of end-to-end fiber optic solutions, Weunion specializes in engineering. For longer distances, fiber-optic cables are typically installed by hanging them between poles (aerial), laying them on the seabed (submarine), or burying them in the ground (underground). The specific environmental conditions of a project determine which method - or combination of methods - is the.
