

Fiber optic cable placed inside the cable tray

Overview

According to the 2014 National Electric Code® (NEC), any listed optical fiber cable is acceptable for a tray application. OCC FOTC cables will withstand aggressive pulling, impact from falling debris, and harsh temperatures. Our tray-rated cables are used in a variety of indoor and outdoor environments such as manufacturing plants, oil refineries and platforms, utilities, substations, under. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. Fiber optic cables are commonly installed indoor and outdoor for inside and outside plants in LANs, MANs and WANs. Indoor cables can be installed in raceways, cable trays above ceilings or under. Cable tray is a raceway system designed to protect and route fiber optic patch cords, multi-fiber cable assemblies and intrafacility fiber cable to and from fiber splice enclosures, fiber distribution frames and fiber optic terminal devices AZE offers a variety of styles, materials and finishes.
