## Overview

With dual-channel configurations, and support for load balancing and failover, the 8Gb Fibre Channel adapters are an ideal solution for users looking to achieve the highest I/O and data throughput for advanced video and access to I. With dual-channel configurations, and support for load balancing and failover, the 8Gb Fibre Channel adapters are an ideal solution for users looking to achieve the highest I/O and data throughput for advanced video and access to IT applications. ThunderLink 8Gb Fibre Channel adapters can support both local and storage area networks for Windows, Li. ATTO Technology has 30 years of experience developing and delivering reliable storage connectivity solutions for customers. ATTO ThunderLink Fibre Channel provide creative professional using Thunderbolt enabled hosts, cost effective access to storage not previously available using FireWire or USB. The integrated family of ThunderLink adapters boast. Fibre Channel adapters are designed to provide fast, redundant and highly available connectivity to Fibre Channel storage and are engineered to manage latency for real-time applications. An ATTO exclusive, Advanced Data Streaming (ADS) technology provides controlled acceleration of data to deliver the most consistent performance and reliable data t. Easy-to-use ATTO ConfigTool features an intuitive GUI that simplifies the installation, management and monitoring of the adapter. With advanced troubleshooting and performance tuning capabilities, ConfigTool provides user with sophisticated diagnostics and the flexibility to control settings for specific applications. ATTO ThunderLink Fibre Channel adapters deliver high-performance and reliable connectivity solutions for the most demanding storage environments, including digital content creation, tape streaming and backup, rich content delivery and server clustering. ATTO ThunderLink Fibre Channel adapters enable users to achieve the ultimate in I/O performance.
