

# Height of the secondary distribution box feet

## Overview

7 meters) high makes it easily accessible without the need to bend or stretch excessively. Adhering to these guidelines during the installation of a distribution box ensures. A subpanel is a secondary electrical distribution point that receives power from the main service panel, allowing for the further division and protection of circuits in a specific area of a home or building. NEC Article 408 covers switchboards, switchgear, and Panelboards installation and applications. Front clearance: There should be a minimum of 3 feet of clearance at the front of all electrical equipment, including panelboards, switches, breakers, starters, transformers, etc. Understanding these dimensions is critical. The dimension for height of working space for equipment operating at 600 volts (V), nominal, or less to ground and likely to require examination, adjustment, servicing or maintenance while energized shall comply with the 110. The work space shall be clear and extend from the grade, floor.
