

# Household electrical distribution box wire burning

## Overview

These are clear warning signs, often indicating a faulty device, loose wiring inside the box, or arcing between the wire conductors and the device, box or coverplate. Charred devices should be inspected immediately, as well. Electrical wire burn, or thermal damage to residential wiring, occurs when excessive heat causes the protective plastic insulation to degrade, melt, or ignite. This failure mechanism is a serious fire risk, as the insulation's breakdown exposes the copper conductor and can lead to a short circuit.
