

How many routers can be connected to a home fiber optic connection

Overview

It is mandatory that you use a single router to establish the Internet connection, if we have an FTTH connection, you can only connect a router to the ONT if you have an external ONT. Most home routers use IP addresses that start with something like 192.x, where "x" is a number between 1 and 254. Both the network and broadcast. How many devices you have and the level of internet activity in your home can help determine what you need. This router is the one that our fiber or cable operator installs to connect us to the network correctly, and it is totally necessary to later. Home » Hardware » How many devices does your router support: from theoretical maximum to actual usage?

The theoretical limit is around 253 IPs, but the practical limit depends on the WiFi, chipset, and usage. Key factors: contracted bandwidth, CSMA/CA, mixed standards, and interference. Useful. A typical Wi-Fi router can support a certain number of devices, usually between 10 to 20, depending on the router's specifications and the type of devices connected.
