

How to handle overheating cables inside cable trays

Overview

Good cable management stops network issues and overheating. This avoids tangles and ensures everything fits well. Sort cables by purpose and use. Poor Heat Escape: Cable trays often have limited space, and many cables are packed in tightly. Environmental Factors: How hot or humid the air is, and how well air moves around, also affects how well cables cool down. Packing the cables too tightly together gives them less space to dissipate heat effectively. Electricians should always tally and vertically providing c tection is easily removed, repHow far apart should cable trays be supported?
