

How to leave power outlets for network server racks

Overview

Typically the best solution to distribute the power throughout a rack is the 0-U PDU's as others have mentioned. As for the outlets: If you have a raised floor, the outlets can be located beneath the floor panels or come in to the bottom of your rack where your UPS. A server power distribution unit helps you deliver power to multiple server devices efficiently and safely. You must install the PDU correctly to maintain server uptime and protect your equipment from electrical hazards. Certified PDUs, such as those from NBYOSUN, feature key safety certifications. I'm building a new server room, and have to decide where I'll be locating the power outlets (120V 30AMP locking connectors) that my UPSs will be powered from. In the past I've put the outlets on the back wall, and just run the cords up and over the ladder racking on to the back of the wall. Monitoring: Consider PDUs with current monitoring to prevent overloads.
