

## Intelligent PDU Communication Interface

### Overview

1 IP = 100 PDUs → minimal network load and scalable to 10,000 PDUs per system. Supports advanced features like reporting, auto-detection, group switching, alerts, and full integration with any DCIM package. Fastest refresh rate: 1x per second. Modular, compact intelligent PDU with inlet metering. Reduce IP addresses by Daisy Chaining up to 64 PDU's. In conventional rack PDU solutions, communication is often hardcoded: one Ethernet port per PDU or a fixed bus structure, typically paired with over-engineered hardware. The range consists of four models offering various levels of power monitoring and power switching features, and can be manufactured as single, dual or 3-Phase with a choice of socket types and mains lead. The Intelligent PDUTM provides network-grade power distribution, remote/local monitoring, and outlet control. An Intelligent PDU allows for remote management, monitoring of PDU vitals, and control of outlets and networked clients.

IPDU Intelligent Power Distribution Unit

One of the key advantages of an iPDU is its ability to provide remote access to critical power-related data. Through integrated network interfaces, data center administrators can remotely monitor power

What is an Intelligent PDU?

Intelligent PDUs also provide data center managers with the ability to access the PDU remotely through the network interface or serial connection to monitor power consumption and configure user-defined
