

Kuwait Access Switch QSFP28

Overview

The QSW-M7308R-4X is a 100GbE L3 Lite Managed Switch with four 100GbE QSFP28 and eight 25GbE SFP28 ports. Some switches offer native QSFP28 ports, meaning the cage and ASIC are specifically designed for 100G operation. These data center leaf / spine switches are specifically designed for 100G operation. This guide provides the definitive roadmap for selecting, deploying, and troubleshooting QSFP28 transceivers while bypassing the painful trial-and-error phase. The QSW-M7308R-4X can uplink to 100G/25G servers and NAS in server rooms or connect to 100G/25G switches to accelerate high-speed storage, video editing, virtualization, and AI applications. Compact, powerful, and flexible, it enables 100G Ethernet links using four 25G lanes. QSFP28 ports are now widely deployed in data centers, AI/HPC clusters, telecom backbones, and enterprise networks. They combine high bandwidth with backward compatibility. QSFP28 (Quad Small Form-Factor Pluggable 28) enables 100G transmission by aggregating four parallel 25G electrical lanes, delivering an optimal balance of bandwidth efficiency, power consumption, and deployment flexibility.
