

Lc-lc interface

Overview

An LC-LC fiber optic cable refers to a fiber patch cable having LC connectors on both ends, connecting equipment like switches, transceivers, or patch panels either inside or between floors or applications used to interconnect equipment in high-density networks with low loss. An LC-LC fiber optic cable refers to a fiber patch cable having LC connectors on both ends, connecting equipment like switches, transceivers, or patch panels either inside or between floors or applications used to interconnect equipment in high-density networks with low loss. The optical fiber connector is a kind of detachable passive optical component used in the connection between fiber to fiber, the light source to the fiber, and fiber to the detector to achieve the light maximize coupling to the receiving fiber. According to the estimating, there are hundreds of. An optical fiber connector is a device used to link optical fibers, facilitating the efficient transmission of light signals. LC-LC connectors are a popular type of connector because of their small size and exceptional performance, which allows for high-density fiber. LC fiber connectors, as the most well-known representative of SFF (Small Form Factor) connector, are widely adopted in today's LAN and data center cabling.
