

Myanmar OLT Optical Line Terminal PAM4

Overview

Taikan's Optical Line Terminal (OLT) utilizes Gigabit Ethernet Passive Optical Network (GEAPON) technology. The compact design is complemented by L2/L3 Gigabit switching and routing function. Fiber-to-the-home. PAM4 is a branch of the pulse amplitude modulation (PAM) technology, which is a mainstream signal transmission technology following non-return-to-zero (NRZ). It provides two main functions: to perform conversion between the electrical signals used by the service provider's equipment and the high-reliability Dynamic Connectivity Platform for long-distance, high bandwidth applications. It is composed of. MPT announced today that, as part of its commitment to enhancing service quality and reliability, it is upgrading its system and relocating its high-speed fiber cable system (FTTH) and 7-digit VoIP telephone services connected to the optical line terminal (OLT) exchange in Tachileik, Shan State. A key new modulation scheme, PAM4, was introduced around 2017 and enabled the big jump from 100G to 400G.
