

Parameters of leakage current switch in primary distribution box

Overview

The leakage protection switch is suitable for the circuits of AC 50Hz, rated voltage of 230V ~ 400V, rated current of 63A, mainly consists of the zero-sequence current transformer, electronic components board, leakage circuit breakers. And it has the function of overload short circuit protection. Leakage Current Measurement Reference Design for Determining Insulation Resistance (Rev. Guard both signals as close as possible to the parts pins). The capacity and rated current of the leakage switch is 100A, (there is no choice but one specification). If 10 mA is selected and the branch is selected to repeat, once a leakage current failure. Illegal current protection switches are protective electrical equipment that should be used against electric leaks that risk life and property safety. Under normal operating conditions, the current value of the outgoing current from the phase conductor in your network should be the same, while the. A leakage protector (RCD), also known as a residual current switch (LDS) or leakage circuit breaker, is primarily used to protect against potentially fatal electric shock and equipment leakage.
