Overview

Prices for new TDR and OTDR systems typically range from \$5,000 to \$30,000, depending on the brand, features, and specific application of the unit. High-end models with advanced measurement capabilities and higher accuracy can reach the upper end of this price range. optical time-domain reflectometer An optical time-domain reflectometer (OTDR) is a specialized instrument used in optical fiber communications to characterize and analyze the optical fibers' characteristics, including attenuation, splice losses, and fiber lengths. By launching a series of light pulses into the fiber and measuring the backscattered and reflected light, OTDRs can determine key parameters such as fiber.
