

## Primary distribution box trips all circuit breakers

### Overview

The main circuit breaker's load capacity is smaller than the total load capacity of all downstream branch breakers. When appliance leakage current reaches or exceeds. Frequent tripping of your distribution box is a critical alarm, not just an annoyance. For facility managers, electricians, and project owners operating overseas—from industrial plants in the Middle East to solar farms in Southeast Asia—these unexpected shutdowns mean costly downtime, safety risks. Very often, the lowest-level circuit breaker does not trip, but the upstream (higher-level) one does! This causes a large-scale power outage! Why does this happen?

Today, we'll discuss this issue. Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. There is also main CB about 80A as much as I recall. Now, I wonder why. In this article, we're going to dive into the nitty gritty of what causes your main circuit breaker to trip and how you can troubleshoot the issue like a pro.
