

Processing of leather thread tails

Overview

The leather manufacturing process are the operations taken to create leather from hides. The procedure is divided into three sub-processes: preparatory stages, tanning, and crusting. All true leathers will undergo these sub-processes. A further sub-process, surface coating, may be added into the sequence. The list of operations that leathers undergo vary with the type of leather. There are envi. Sub-processesThe preparatory stages are when the is prepared for. During the preparatory stages many of the unwanted raw skin components are removed. Many options for pretreatment of the skin exist. Not all of the options ma. The leather making process is in general restricted to, but if the surface coating sub-process is added, then some continuous processing can be included. The flow has to follow the prepara.
