

# Professional Distribution Box Wire Color

## Overview

The mandatory colors for power wiring in the National Electrical Code (NEC) are Green, Bare, or Green/Yellow (a yellow stripe or band on green) for the protective ground (PG), and White (or alternatively Gray) for the neutral wire. The IEC 60446 standard, “Basic and Safety Principles for Man-Machine Interface, Marking, and Identification,” establishes global guidelines for identifying electrical equipment terminals, conductors, and wiring colors. Proper identification prevents hazards, streamlines maintenance, and ensures. These are some beginner-friendly safety tips that you should remember before you touch any wire: ● Power Off All the Time: Switch off the breaker whenever working on any wires. It is the initial and the most significant step ● Test Before You Touch: A multimeter or a voltage tester can be used to. Wire color codes are an international standard system that uses insulation colors to show the function, phase, or purpose of a wire. It works like a “language” for wires. Yellow for Earth - Yellow wire is used for the high voltage for lights, fans. However, any other colors, except those mentioned above, can be. It took until 1928 for wire color coding to make its debut.
