

Relay Protection Team Maintenance Objectives

Overview

Establish a Protection System Maintenance Program (PSMP) as identified in PRC-005. A comprehensive relay protection system maintenance checklist ensures that every relay, control circuit, and protection scheme receives the verification it needs to perform reliably under fault conditions. Rare operation, critical function: Protective relays may operate only once every several. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years. Protection systems play a key role in ensuring the safe and reliable operation of the entire electrical grid including generation, transmission, and distribution for utility and industrial applications.
