

Relay protection current short circuit

Overview

Short circuit protection safeguards electrical systems by interrupting excessive current flow caused by faults. It prevents equipment damage, fire risks, and personal injury by using fuses, breakers, or relays to quickly detect and isolate dangerous short circuits. There are two ways for current protection : USING A FUSE : to protect the. What is the function of power system protection?

The components used in the power system are usually dimensioned to withstand a short circuit current for one or three seconds but power system stability during short circuit current may be endangered already after 200ms. Many times accidentally terminals of batteries and other power supplies get short-circuited. Due to this, they get hot and start degrading.
