

# Simple Connection Method for Fiber Optic Switches

## Overview

Active connection utilizes various fiber optic connectors (plugs and sockets) to connect site-to-site or site-to-cable. This method is flexible, simple, convenient, and reliable, commonly used in building computer network cabling. The typical attenuation is 1dB per connection. Network topology refers to the way in which the links and nodes of a network are arranged in relation to each other. Unlike traditional copper cables, fiber optic cables leverage the principles of light propagation to transmit data over long distances with minimal. Whether you're planning an FTTH deployment, upgrading a data center, or working in telecom infrastructure, this guide will help you make informed decisions when choosing fiber connectors. This guide offers the key technical insights you need to. SFP/SFP+ Modules: Small Form-factor Pluggable (SFP) modules are transceivers that connect the switch to the fiber optic cables.
