

South Asia 40G Single-Mode Optical Module

Overview

The 40GBASE-ER4 QSFP+ 1310nm Optical Transceiver Module is designed to transmit 40GBASE Ethernet throughput up to 40km over duplex LC connectors using single-mode fiber (SMF) at 1310nm wavelength. The transceiver is compliant with QSFP+ MSA, IEEE 802.3.1.1. Trusted by 260K+. Single Mode Optical Modules Market size was valued at USD 5.2 billion by 2034, exhibiting a CAGR of 6.3%. 40GBASE-ER4, and OTU3 standards. Digital. With four mutually independent channels for transmitting and receiving optical signals, 40G optical modules are able to provide high-density and low-power 40G Ethernet connectivity transmission applications for data centers, high-performance computing networks, enterprise core and distribution. What is a 40G/100G Single-Mode Single-Core Optical Fiber Module?

A 40G/100G single-mode single-core optical fiber module is a high-speed optical transceiver that is designed to transmit and receive data at speeds of 40Gbps or 100Gbps over a single strand of single-mode optical fiber. These modules. The newest wide adopted high speed interface for optical transceivers is the QSFP+ (Quad SFP+) that offers aggregated optical speeds of 40G. This is possible by simultaneously running four separate 10G channels and sum up the capacity into a single channel.
