

Switch Access Security Configuration

Overview

Use Strong Passwords: Configure strong, unique passwords for all switch accounts, avoiding default or weak credentials. **Enable SSH:** Disable insecure protocols like Telnet and enable Secure Shell (SSH) for remote management. Convuluted type 9 secret is supported in Cisco IOS XE Gibraltar 16. 2, you can/may be locked out of the device. Before you downgrade to any. Cisco Meraki MS switches offer the ability to configure access policies, which require connecting devices to authenticate against a RADIUS server before they are granted network access. **Control Plane:** Control plane consists of the protocols and processes that. Configuring a local Manager password is a fundamental step in reducing the possibility of unauthorized access through the switch WebAgent and console (CLI and Menu) interfaces. Access Security provides different security measures for accessing the switch remotely so as to enhance the configuration management security. This function is used to control the users' access to the switch based on IP address, MAC address or port.
