

Temporary cable rack height for distribution box

Overview

Minimum height should be 19 ft. If cables are required to be laid on the ground on a temporary basis, additional protection must be provide. Where unavoidable, they should only be made in purpose-built. The proper installation of a distribution box involves placing it at the right height to ensure safety and convenience. 5 meters, which is convenient for operation and maintenance. When the trench is filled in, surface markers should indicate the cable route. Low and medium voltage cables. Standard 19-inch (48. 3 cm) (two- or four-post EIA cabinet or rack, with mounting rails that conform to English universal hole spacing per section 1 of ANSI/EIA-310-D-1992). Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1).
