

The core switch has only one VLAN

Overview

By default, only VLAN 1 is configured on the switch, so if you connect hosts on an out-of-the-box switch they all belong to the same Layer 2 broadcast domain. core is the router bw4 is connected to core bw3 is connected to bw4 bw2 is connected to bw3 11-01-2013 10:45 AM You can create a VTP domain name by running the following command. 'vtp domain DOMAINNAME' where DOMAINNAME is well. The VTP domain name If all the other switches have this domain name. So I'm in the process of upgrading my network core from a non-Aruba switch pair to a CX8325 VSX pair. Now it suddenly is working fine. As a test I was able. Up to 4094 VLANs can be configured on Cisco catalyst switches. I have a switch at a manufacturing facility that has a few VLAN on it for wireless, phones, etc. and a VLAN numbered 18 that is used only for access ports on this switch and is trunked to upstream distribution and core switches. We are replacing our procurve 3500yls and implementing Aruba 6300ms. We assigned a static IP address (10.
