

## The router has no fiber optic indicator light

### Overview

The key is to identify the root cause, such as power issues, loose connections, or router malfunctions. In most cases, restarting the router, checking the power source, and resetting it can restore your device's lights and restore your internet connection. If your router's lights suddenly go out, don't panic—this common issue can often be fixed quickly with a few simple steps. Once it gets connected the light will stop. If the internet light on your TP-Link router is off, or the web interface shows "WAN Port Unplugged" or "Something Is Wrong with the Hardware Connection," this guide walks you through diagnosing and fixing the problem. When it's green and steady, everything is fine. No Light: The ONT is not receiving power. Solid lights indicate stable states whilst flashing lights show activity like data transmission or.
