

What is the optimal length of cable to leave in the fiber optic reel

Overview

Using the reel factor and the cable diameter, you may now calculate the approximate maximum cable length in feet that will fit on that reel. $\text{Length of Cable} = \text{Reel Factor} /$. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. I'm reading spools come in various lengths, and I get that, but if I. Fiber optic cables have Kevlar aramid yarn or a fiberglass rod as their strength member. On long runs, use proper lubricants and make sure they are compatible with the cable jacket. Installation guidelines regarding minimum bend radius, tensile loads, twisting, squeezing, or pinching of cable must be followed.
