

## What type of panel should I buy for fiber optic cables installed in the wall

### Overview

A fiber patch panel is a mounted enclosure—either rack-mounted or wall-mounted—used to terminate, manage, and interconnect multiple fiber optic cables. It acts as a hub for organizing splices and patch cords, streamlining fiber management and preserving signal integrity. A bulk (multi-strand) fiber cable enters the patch panel and then each fiber strand is separated into individual strands or pairs of strands. These individual strands will then connect to electronic devices. The traditional fiber optic patch panel is no longer just a passive hardware box; it is a critical intersection point for managing cable geometry, mitigating insertion loss, and ensuring operational scalability. In an era where data speeds and network reliability are non-negotiable, the patch.
