

## When to use an industrial switch

### Overview

An industrial Ethernet switch is designed specifically to withstand harsh conditions such as extreme temperatures, humidity, vibration, and electrical noise found in manufacturing plants, oil refineries, power stations, and transportation systems. When choosing a switch for an industrial environment, one of the most important decisions to make is whether to use a managed or unmanaged industrial Ethernet switch. Both types have unique advantages and applications, and understanding their differences can help you select the right option for. Industrial Ethernet switches Ethernet devices designed for harsh industrial environments deployment that are prone to shocks, vibrations, and extreme temperatures. These switches come in two types, managed and unmanaged offer Gigabit, and PoE capabilities with various industry certifications. Many industries are now relying on industrial switches, including environment protection, mining, transportation, and smart city surveillance.
