

## Where is the major gap in the FC interface

### Overview

Therefore when one butts the ferrule against a flat stop, such as in a collimator receptacle, there is a gap between the stop and the end of the fiber. Furthermore the variation in the endface geometries from one APC connector to the next affects the size of this gap (See Figure. Electromagnetic radiation, i. visible light, but also UV or NIR radiation, is directed at the object of interest and some of the emitted wave positions interact with its matter. Exactly this energy will then be. The FC (Fiber Channel) connector is an optical fiber connector that uses a ceramic ferrule to safeguard and align the fiber tip. The figure below illustrates a typical FC connector. To ensure. FC Connectors, also known as Ferrule Core Connectors, are often referred to by various names like "Fiber Channel" or "Frank Charlie" in the industry. Its measurement is defined by IEC standard 61753-1.
