

Which type of dust explosion-proof distribution box is better

Overview

Pressurized (Ex p) enclosures are ideal because they protect sensitive electronics from hazardous gases or dust. Hazardous locations are classified differently depending on geography and. Choosing how cables enter an explosion-proof distribution box is one of those decisions that looks straightforward on paper but gets complicated fast once you factor in the actual site conditions. Cable glands and conduit systems both do the job—sealing the enclosure, protecting the cable. Explosion-proof (Ex d) contains an explosion. Intrinsically safe (Ex i) prevents ignition entirely by limiting energy. Do hazardous area enclosures need special cable glands?

Yes.) and maintain the integrity of the protection. Pepperl+Fuchs provides a specialized portfolio of Ex d (flameproof) and Ex tb (dust protection by enclosure) certified terminal boxes and junction boxes engineered for reliable use in explosion-hazardous areas.
